General Questions

Practice Questions

Q1. If a graph has 5 vertices and 10 edges, what is the maximum time complexity of Dijkstra's algorithm using an adjacency matrix?

- A. $O(10)$
- B. $O(5^2)$
- C. $O(5 \log 5)$
- D. $O(10 + 5^2)$

Solution: Using an adjacency matrix, the time complexity of Dijkstra's algorithm is $O(V^2)$, which in this case is $O(5^2)$ or $O(25)$.

Q2. What is the space complexity of Dijkstra's algorithm when using a priority queue?

- A. $O(V)$
- B. $O(E)$
- C. $O(V + E)$
- D. $O(V \log V)$

Solution: The space complexity of Dijkstra's algorithm when using a priority queue is $O(V)$, as it needs to store the distance for each vertex.
