## **General Questions**

Practice Questions

---

**Q1. Which structure protects the developing seeds in angiosperms?**

- A. Petals
- B. Sepals
- C. Ovary
- D. Stamen

*Solution: The ovary protects the developing seeds and will mature into the fruit after fertilization.*

**Q2. What is the primary advantage of seed dispersal?**

- A. Increased water absorption
- B. Reduced competition among seedlings
- C. Enhanced photosynthesis
- D. Improved nutrient uptake

*Solution: Seed dispersal reduces competition among seedlings by spreading them over a larger area, increasing survival chances.*
